# Luzit PR

## Subheading

In today's tech era, it is easy to be distracted from your schedule. Luzit will make you get the best of you, by saving time, reaching goals, and staying on schedule.

## Summary

Reaching your goals with a schedule that is constantly changing is challenging. Today, multitasking in your personal life is one ofthe main reasons for not reaching your goals: aproject at work that makes you miss out on your date or going late to a pub that affects your morning run. In short: Failure to meet the schedule, affects your future mission and increases the prospects of not reaching your goal.

Luzit is a modern system that is designed to organize calendars automatically which will help you meet your desires. This powerful attribute enables uses such as real-time changing, dedicating time to the more important tasks, splitting missions into comfortable times, and dividing objectives into productive tasks. Luzit understands rich and multi-faceted changes, which can be used to provide accurate data that will help make productive changes personally for each customer.

## Problem
[Describe the problem your product solves]

These days everyone uses a calendar, mainly because it's a kind of accessible personal assistant. But for having an arranged calendar, that reminds your tasks smartly, you must invest a lot of time in it. And most of the time you will arrange it again in a few days and even in a few hours.
Imagine a situation that happens every week. You are starting your week, and you have these missions: four hours of doing homework, writing an article to send by Wednesday, two gym practices, two basketball practices, and dinner with your family every day at 20:00. Now add to this your workday from 09:00-18:00. Now imagine that on Sunday your boss tells you that your team meeting is suddenly rejected to be at 19:30 Zoom, and 20:00 on Tuesday your friend reminds you that he comes in 10 minutes to see the game as you talked about last week. Those real-time changes will take you more time from doing your tasks, moreover, it will mess up your arranged calendar.

Furthermore, humans take on new goals in their life like running a marathon, developing an app, learning to cake, or just visiting more friends and family members. The road to reaching these goals requires repeated perseverance for a long time. And now combine this with your calendar. In addition to the mess of adding these to the calendar, it's hard to split all those missions productively, that will not affect your daily conduct and your main tasks.

## Solution
[Describe how your product elegantly solves the problem]

With Luzit is a productive system that going to help customers decrease wasted time and increase their goals. Luzit will automatically arrange the user calendar, focusing on the priority things, insisting on staying on time, and going forward on the road toward on customer's goal.

Luzit will get from the user information about his life: activities (school, work, hobbies, and co), tasks & projects under each activity, repeatedly missions, and one-times mission. After that, the user will rate his priorities, and at the end, he will add rules (working till 18:00 between Sunday to Thursday, 5 hours rest between meals to practice, and co). Moreover, he will have the option to take information from his online calendar to save time.
The system will take all this info and will make him a new calendar, and he will also be to able copy it into his online calendar.

In the future, after the system learns the user's lifestyle, it will use Machine Learning for editing each mission's time and splitting the customer's new goals in the most productive way for the customer.
